

Working together with our Affiliate Network.

We're proud of our network of leading manufacturing affiliates that offer a strong and growing portfolio of products for almost any industry. They are experts at creating innovative and ideal applications for CuVerro® alloys, and designing high quality products that provide the benefits of EPA-registered bactericidal copper surfaces.

Our affiliates are your suppliers. For specific product information and pricing, contact any of the CuVerro manufacturer experts listed below.

How and where CuVerro works.

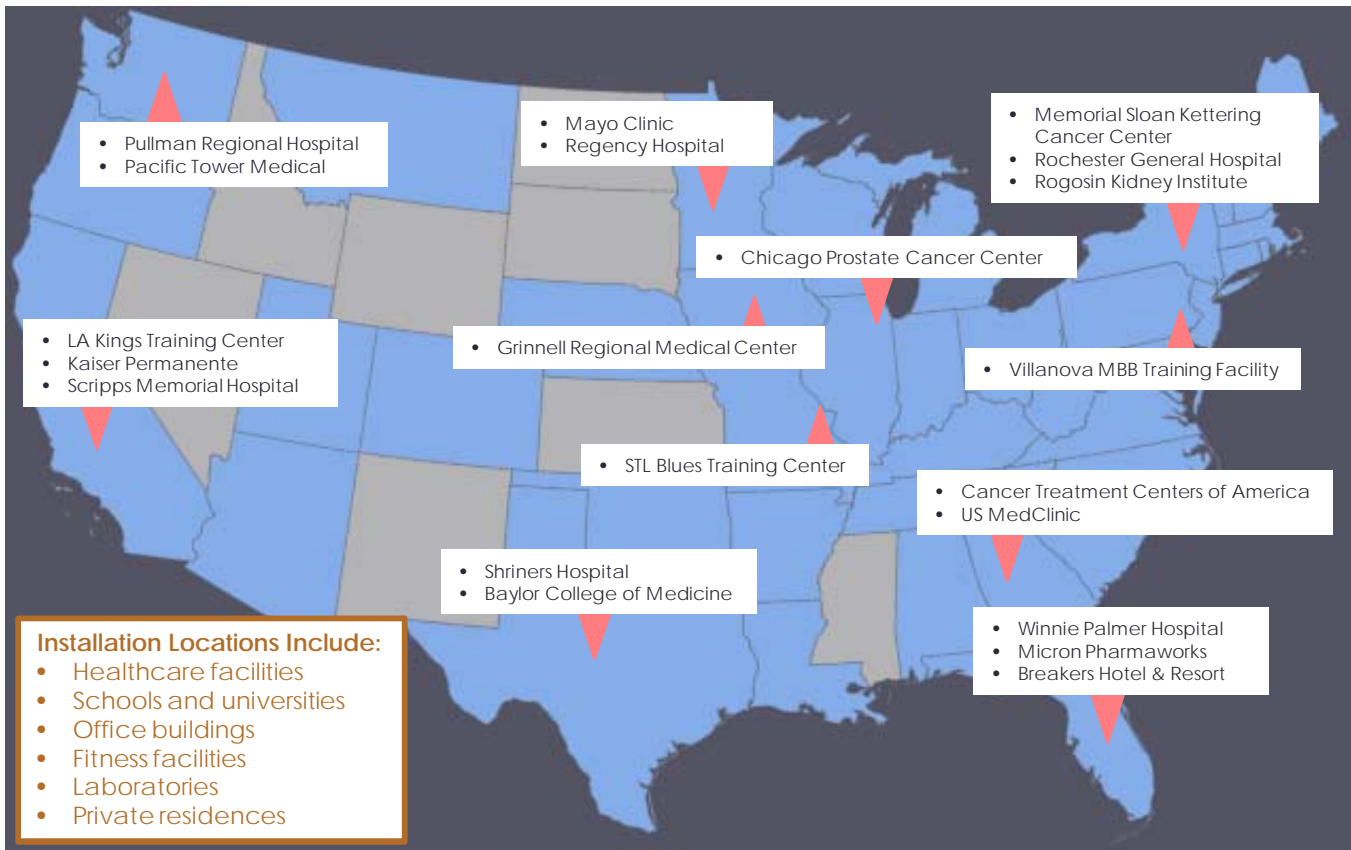

CuVerro Copper Kills Bacteria* & Keeps Killing it

Where is CuVerro?

Products made with CuVerro® bactericidal copper alloys have been installed in nearly 300 facilities across 39 states and 14 countries, helping create cleaner environments everywhere.

*Laboratory testing shows that, when cleaned regularly, CuVerro copper surfaces kill greater than 99.9% of the following bacteria within 2 hours of exposure: Methicillin-Resistant Staphylococcus aureus (MRSA), Staphylococcus aureus, Enterobacter aerogenes, Pseudomonas aeruginosa, E. coli O157:H7, and Vancomycin-Resistant Enterococcus faecalis (VRE). The use of CuVerro® bactericidal copper products is a supplement to and not a substitute for standard infection control practices; users must continue to follow all current infection control practices, including those practices related to cleaning and disinfection of environmental surfaces. This surface has been shown to reduce microbial contamination, but it does not necessarily prevent cross contamination. CuVerro® is a registered trademark of GBC Metals, LLC and is used with permission. See cuverro.com for more details.
